

Supplementary Tables

Supplementary Table 1. Fold change in mRNA expression in *CEMP1*, *COL I*, and *OPN* in aged parental PDL cells, cementoblastoma cells (TCN), STRO-1 positive PDL cells, and STRO-1 negative PDL cells compared to their young counterparts at two weeks. Data correspond to Figure 5.

<i>CEMP1</i>	PDL	TCN	S+	S-
Young	1	1	1	1
Aged	0.496546248	0.382447423	208.4176045	0.267943366
<i>COL I</i>	PDL	TCN	S+	S-
Young	1	1	1	1
Aged	2.118926189	0.777366405	3.095129987	1.995384353
<i>OPN</i>	PDL	TCN	S+	S-
Young	1	1	1	1
Aged	12.89136685	0.7456997	12.90626815	0.695762422

Supplementary Table 2. Fold change in mRNA expression for *CEMP1* in aged and young parental PDL cells, STRO-1 positive PDL cells, STRO-1 negative PDL cells, cementoblastoma (TCN) cells, and hMSC over time and under osteogenic (Tx) or control (UT) media conditions. Data correspond to Figure 4.

Supplementary Figures

Supplementary Figure 1. Phase contrast images of young and aged PDL cells grown under control and osteogenically induced conditions. A. Images of young (P3-4) PDL cells grown in control and osteogenically-induced media for 2 weeks. B. Images of aged (P11-13) PDL cells grown in control and osteogenically induced media for 2 weeks.

Supplementary Figure 2: Time course assays showing *Osteopontin (OPN)* expression in young and aged parental PDL, STRO-1 positive, STRO-1 negative, cementoblastoma (TCN), and human mesenchymal stem (hMSC) cells under osteogenic and control media conditions. The graphs show the relative expression of *OPN* (Y-axis) as assessed by real-time quantitative reverse transcription PCR from 0 hr through one week (X-axis) comparing control untreated cells (UT) and osteogenically induced cells (Tx). * indicates significant upregulation or downregulation of aged cells $P < 0.05$.

Supplementary Figure 3. Time course assays showing *Collagen 1 (COL 1)* expression in young and aged parental PDL, STRO-1 positive, STRO-1 negative, cementoblastoma (TCN), and human mesenchymal stem (hMSC) cells under osteogenic and control media conditions. The graphs show the relative expression of *COL 1* (Y-axis) as assessed by real-time quantitative reverse transcription PCR from 0 hr through one week (X-axis) comparing control untreated cells (UT) and osteogenically induced cells (Tx). * indicates significant upregulation or downregulation of aged cells $P < 0.05$.
